

## Product Information Sheet

### Purple Cushhh Stem Cell Booster

90 Capsules (2-3capsules per day or as prescribed by a Healthcare Practitioner)

Anti-cancer support, Parkinson's Support, ADHD/ADD Support, Boost red-, white – T and R cells via stem cells  
Activates neurotransmitters dopamine and serotonin via monoaminergic system and Boosts general well-being

## Ingredients

Rosemary, Rue, Wild Dagga, Nettle

Stem cells are the cells from which all other cells with specialised functions in the body are generated. Stem cells provide new cells for the body by dividing. As the cells divide, they can change into different specialised cells to replace the cells that have been damaged or lost. Unlike muscle, blood or nerve cells which do not normally duplicate stem cells have the unique ability to self-renew and to recreate functional tissues many times.

Stem cells come from two sources: adult body tissue and embryos. Scientists have discovered that many tissues and organs – for example the brain, bone marrow, blood vessels, skeletal muscle, skin, heart and liver - contain a number of stem cells to help maintain the tissue or organ. Adult stem cells are cells capable of making identical copies of themselves and making cells that have specialised functions. All blood cells develop from stem cells in the bone marrow. The body needs healthy bone marrow for the production of blood cells. The stem cells in the brain assists with the Monoaminergic System - the network of neurotransmitters involved in the regulation process of emotions in the body, for example Dopamine (reward motivated and motor control neurotransmitter) and Serotonin (mood regulating neurotransmitter).

The ingredient **Rosemary** in the Stem Cell Booster is a rich source of antioxidants (substance that protects cells from damaging effects of free radicals) and anti-inflammatory (substance that reduces redness, heat, swelling and pain as result of inflammation of injury) compounds. This helps to improve blood circulation and boost the immune system. Rosemary also improves memory performance as it helps prevent the breakdown of acetylcholine (brain chemical important for thinking, concentration and memory).

**Rue** is useful for the treatment of anxiety and headaches as well as arthritis and tumours.

The medicinal qualities of **Wild Dagga** will calm palpitations and irregular heartbeats of heart conditions associated with anxiety and tension.

**Nettle** provides a wide variety of nutrients and has been used to treat pain and reduce the inflammation associated with Osteoarthritis
