Breaks down fat, Improves digestion, Boosts Energy, Detox's
liver, Supports kidney function, Improves circulation,
Relieves excessive flatulence**

Ingredients

**Fumitory, Devils Claw, Buchu, Burdock, Peppermint,
Calendula, Birch**

A person, who is overweight or obese, is more prone to serious health problems, such as diabetes, high blood pressure, coronary heart disease, and stroke. Excess weight also affects a person's energy level and ability to carry out a daily routine as well as putting great stress on the joints. If a person regularly eats more kilojoules than what the body needs, it can lead to weight gain. Together with consuming more calories (unit of energy) than needed, a sedentary lifestyle (spending too much time seated and being inactive) also influences weight gain.

The ingredient, Fumitory in Weight Loss Booster, has diuretic properties and will help a person to lose weight by getting rid of excess fluid in the body.

The benefit of Devil's Claw in Weight Loss Booster is the fact that it helps to suppress a person's appetite by interaction with the "hunger hormone" Ghrelin. Ghrelin is the hormone that sends signals to the brain to feel hungry and plays a key role in regulating calorie intake and body fat levels.

Buchu is a natural diuretic and has an effective flushing action on the kidneys which helps to get rid of impurities from the digestive system and relieves water retention and bloating.

Burdock stimulates the body's natural metabolism of fats which allows the body to utilise stored fats in an effective way, which promotes weight loss.

Peppermint relieves digestive upsets such as gas, bloating and indigestion, as well as reducing hunger cravings and will help a person to feel full faster which assists with weight loss.

The diuretic properties of Calendula assist with the detoxing of the body which improves gastro-intestinal health and weight loss.

Birch assists the body with the process that changes food into energy (metabolism). Its natural diuretic properties also helps to remove harmful toxins from the body which accelerates natural fat burning and assist with weight loss.
